

Title of the Use Case	Description	Details
Use Case 1 – Agentic AI Assessment & Proctoring Platform	(MCQ + Coding Continuous Secure Explainable) Business Context Organizations and ed-tech platforms struggle to conduct credible, scalable, remote assessments that test real skills. Current Problems MCQ-only exams are easy to cheat Coding tests lack real-time monitoring Human proctors don’t scale Plagiarism detection is post-facto Candidates game the system (tab switching, AI tools, collusion)	Business Goal Build an AI-native assessment platform that: Assesses knowledge + problem solving Should be compatible with various programming languages like Python, Java, SQL etc. Actively monitors candidate behavior Makes real-time decisions Keeps humans in control for high-risk cases Produces auditable outcomes This platform should be viable for: Hiring assessments University exams Internal skill certifications
Use Case 2 – Agentic AI Hiring & Talent Evaluation Platform	(End-to-End Ethical Explainable Human-Centered) Business Context Enterprises hire at scale but face systemic hiring failures: Current Problems Resume screening is keyword-driven and biased Good candidates are missed; noisy profiles pass through Interviews are inconsistent across panels Hiring decisions are not explainable Recruiters are overloaded with coordination work	Business Goal Build an Agentic AI-powered Hiring Platform that: Evaluates skills, not resumes Coordinates the entire hiring lifecycle Assists humans without replacing judgment Ensures fairness, compliance, and auditability Target users: Enterprise HR Hiring managers Interview panels
